INTERN PRODUCT DEVELOPMENT SPRINT

Project: Product Research, Prototyping & Development
Presentation: Tuesday, 15 September 2026

Your Challenge

Over the next week, you will take ownership of researching, designing and prototyping a technology product.

The goal is not simply to build an app. You will follow the process of taking an idea from a **real problem to a working prototype**:

PROBLEM → RESEARCH → IDEA → PROTOTYPE → TEST → FEEDBACK → ITERATE → MVP → LAUNCH

For this sprint, your focus will be on:

1. Research → 2. Product Definition → 3. Prototype → 4. Test & Improve

You will be responsible for your product from start to finish and will present your work to the team on **Tuesday, 15 September**.

IMPORTANT: WORKING DAYS

You are **not required to work on Mondays**.

Your working days for this sprint are:

Tuesday 8 September – Friday 11 September
Tuesday 15 September – Presentation Day

The weekend is also not an expected working period.

TUESDAY 8 SEPTEMBER — PRODUCT DEFINITION

Goal: Decide exactly what you're building.

Before you start building, make sure you understand the problem and the user.

Your deliverables:

- Target user
- Problem statement
- Research findings
- 3–5 competitor/existing tools
- What users currently do
- Key pain points
- Product opportunity
- Initial product idea
- Product name
- One-sentence value proposition
- User persona
- Core user journey
- MVP features
- Features you are deliberately **NOT** building
- Basic wireframes

By the end of Tuesday:

> **“I know exactly what I'm building and why.”**

Do not rush into Lovable before you have defined the product.

WEDNESDAY 9 SEPTEMBER — PROTOTYPE

Goal: Build the core workflow.

Your process should look something like:

ChatGPT / Google AI → Plan → Prompt → Lovable → Test → Improve

Focus on:

- UI
- Navigation
- User flow
- Database
- Authentication

- Core functionality

The product does not need to be perfect.

It needs to work.

Don't spend the day creating a beautiful landing page while the actual product doesn't function.

Build the core user experience first.

THURSDAY 10 SEPTEMBER — TEST & FIX

Goal: Break your own product.

Test the product from different perspectives.

Check:

- New user
- Existing user
- Empty database
- Incorrect inputs
- Different permissions/user types
- Mobile experience
- Main user journey
- Buttons and links
- Forms
- Error and success states

Then ask someone else to use it **without explaining exactly what to click**.

Watch where they get confused or stuck.

Use that feedback to make improvements.

Remember:

A problem you discover during testing is not a failure.

Finding the problem is part of product development.

FRIDAY 11 SEPTEMBER — IMPROVE & PREPARE

By Friday, you should have:

A working prototype + research + a clear product story.

Your presentation should cover:

1. **The Problem** — What problem are you solving?
2. **Target User** — Who experiences it?
3. **Research** — What did you discover?
4. **The Solution** — What did you build?
5. **How It Works** — What is the user journey?
6. **Demo** — Show us the product working.
7. **What You Learned** — What surprised you or changed during the process?
8. **What's Next** — What would you build or improve if you had more time?

WEEKEND — OPTIONAL

There is **no expectation that you work over the weekend**.

If you want to continue experimenting or improving your product, that is completely optional.

MONDAY 14 SEPTEMBER

You are **not expected to work on Monday**.

Use the time as a break before presentation day.

TUESDAY 15 SEPTEMBER — PRESENTATION DAY 🚀

You will present your product to the team.

Presentation structure

3 minutes — Problem + Research

Explain:

- Who is the user?
- What problem did you identify?
- What research did you conduct?
- Why do you believe this is worth solving?

2 minutes — Product

Explain:

- What did you build?
- Why did you choose this solution?
- What is included in your MVP?

5 minutes — Live Demo

Show the product working.

Take us through the main user journey.

2 minutes — What's Next

Explain:

- What would you improve?
- What did you learn?
- What would you build next?
- Could this become a real product?

There will then be time for team questions.

YOUR EXPECTATIONS

You are responsible for your product from **start to finish**.

Don't wait for someone to tell you exactly what to research.

Don't wait for someone to tell you every feature to build.

Don't wait for someone else to solve every technical problem.

Use the resources available to you:

- Research
- Google
- ChatGPT
- Google AI/Gemini
- Lovable
- Documentation
- Existing products
- Your team

Ask questions when you need help, but first try to investigate and solve the problem yourself.

If something doesn't work, come back with:

“This is the problem → this is what I tried → this is what happened → this is what I think we should try next.”

You are not expected to know everything.

You **are** expected to take ownership, think critically, experiment and learn.

The goal

By the end of this sprint, you should be able to say:

> **“I identified a problem, researched it, developed a product idea, designed the user experience, built a working prototype, tested it and presented it.”**
